

A Visiting Research Assistant Professor position is available in the Department of Pharmacology and Regenerative Medicine. Job duties include the maintenance and differentiation of pluripotent stem cells, optimization and standardization of stem cell differentiation protocols, the development of novel stem cell lines using genome editing tools and the differentiation of stem cells to generate organoids. This is a hands-on lab-based role at the forefront of iPSC technology. The ideal applicant should have extensive prior experience with mammalian iPSC differentiation. Candidates must have a PhD or equivalent doctoral degree with experience in designing and performing mammalian stem cell experiments as well as molecular biology expertise such as using real time PCR and gene silencing (siRNA or shRNA). For full consideration, apply at link: <https://jobs.uic.edu/job-board/job-details?jobID=166969>

University of Illinois faculty, staff and students are required to be fully vaccinated against COVID-19. This employment offer is contingent on your timely submission of proof of your vaccination. If you are not able to receive the vaccine for medical or religious reasons, you may seek approval for an exemption in accordance with applicable University processes.

As an EOE/AA employer, the University of Illinois encourages applications from individuals regardless of an applicant's race, color, religion, sex, gender identity, sexual orientation, national origin, and Veteran or disability status. The University of Illinois conducts background checks on all job candidates upon acceptance of contingent offer of employment. Background checks will be performed in compliance with the Fair Credit Reporting Act. The University of Illinois System requires candidates selected for hire to disclose any documented finding of sexual misconduct or sexual harassment and to authorize inquiries to current and former employers regarding findings of sexual misconduct or sexual harassment.
